

## **THE RIGHT PRIME MINISTER AND CABINET FOR CURRENT SOMALIA.**

My response to the call by the international community for ceasefire by the Somalis is that we should get serious and honest and re-unite the five parts into which the international community divided the Somali Nation and create a Prosperity Horn Common Market. For more on this and the sort of rulers needed in Mogadishu now, please read more below and Google “amiirdaloon”.

Though I personally have so many doubts about the degree of honesty and seriousness for the good there, while the resigning prime minister has been " A Civilian Intellectual" with an easy and happy city background, I would suggest that the right qualification of a prime minister there has to be "A Military/Police Intellectual" with less happy-easy-going city background who has been out of the activities in the last twenty years there but who anyway followed closely what has been going on there.

By the collapse of the Somali government in about twenty years ago, there were many well trained and well educated young military/police officers who fled to all parts of the world and got additional modern, civilian, and higher education who therefore are by now about fifty years old and well qualified for the current Somali situation without having been badly painted by the twenty year old mess.

One of the reasons of my proposal is that there is no much civilian management science there now but more of "Political Military Science". The business there is rough military business and thus needs rough but well trained and well educated military/police men, including at the cabinet level and more!!!!!!

THE RIGHT PRIME MINISTER FOR CURRENT SOMALIA is probably = {Colonel Abdullahi Yusuf minus (cleric phobia/wadaad nacayb) plus (genuine International Community and Somali Support)}.

Similar questions could also be raised about the qualifications of the president. But, hold on a second! By the way, why we don't drop all this rough and never ending business, and instead, re-unite the five parts of the Somali Nation and then create a Prosperity Horn Common Market in which Somalia's landlocked, xagar-oodan sister-neighbours may reach the Somali beach/coast for fishing and swimming not in the supplied tanks as now but in own open cars or by legs?
